| 5- NTFS vs DMS | 7 |
| 6- Example please ! | 8 |

STOP !!!

ACCESS POINT

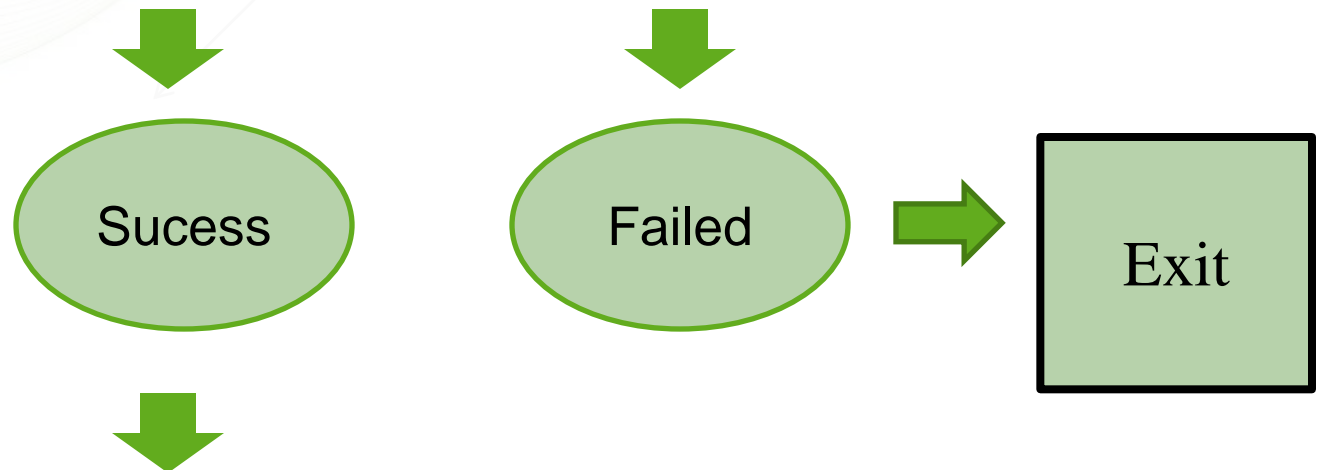

Authenticate yourself please !

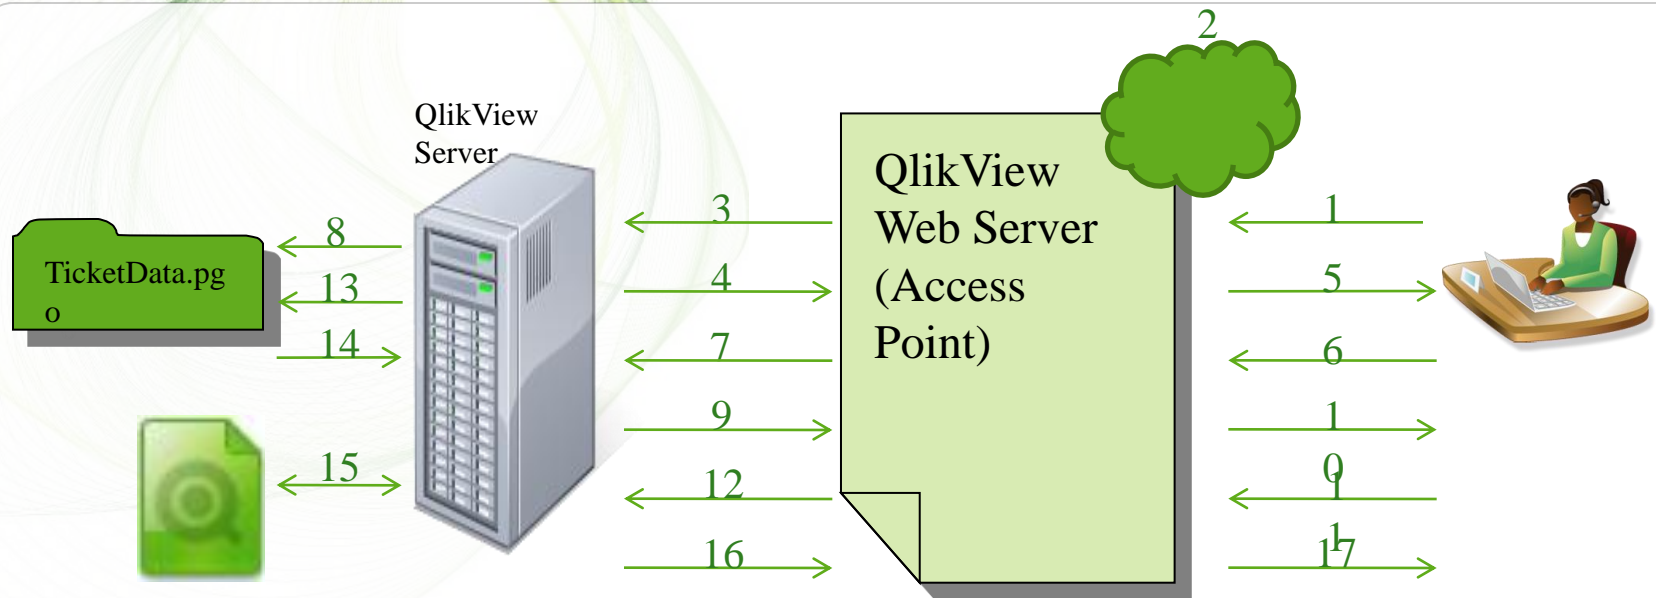

Who are you ?

Access Point is the door :

- On IIS : provides automatic authentication against AD or Windows
- On QlikView Web Server : provides automatic authentication against AD or Windows with data encryption
- Custom web page, or Login.asp for non-Windows users
- URL Redirection to Site Minder or Netegrity and redirection back to Qlikview
- SSO Portal

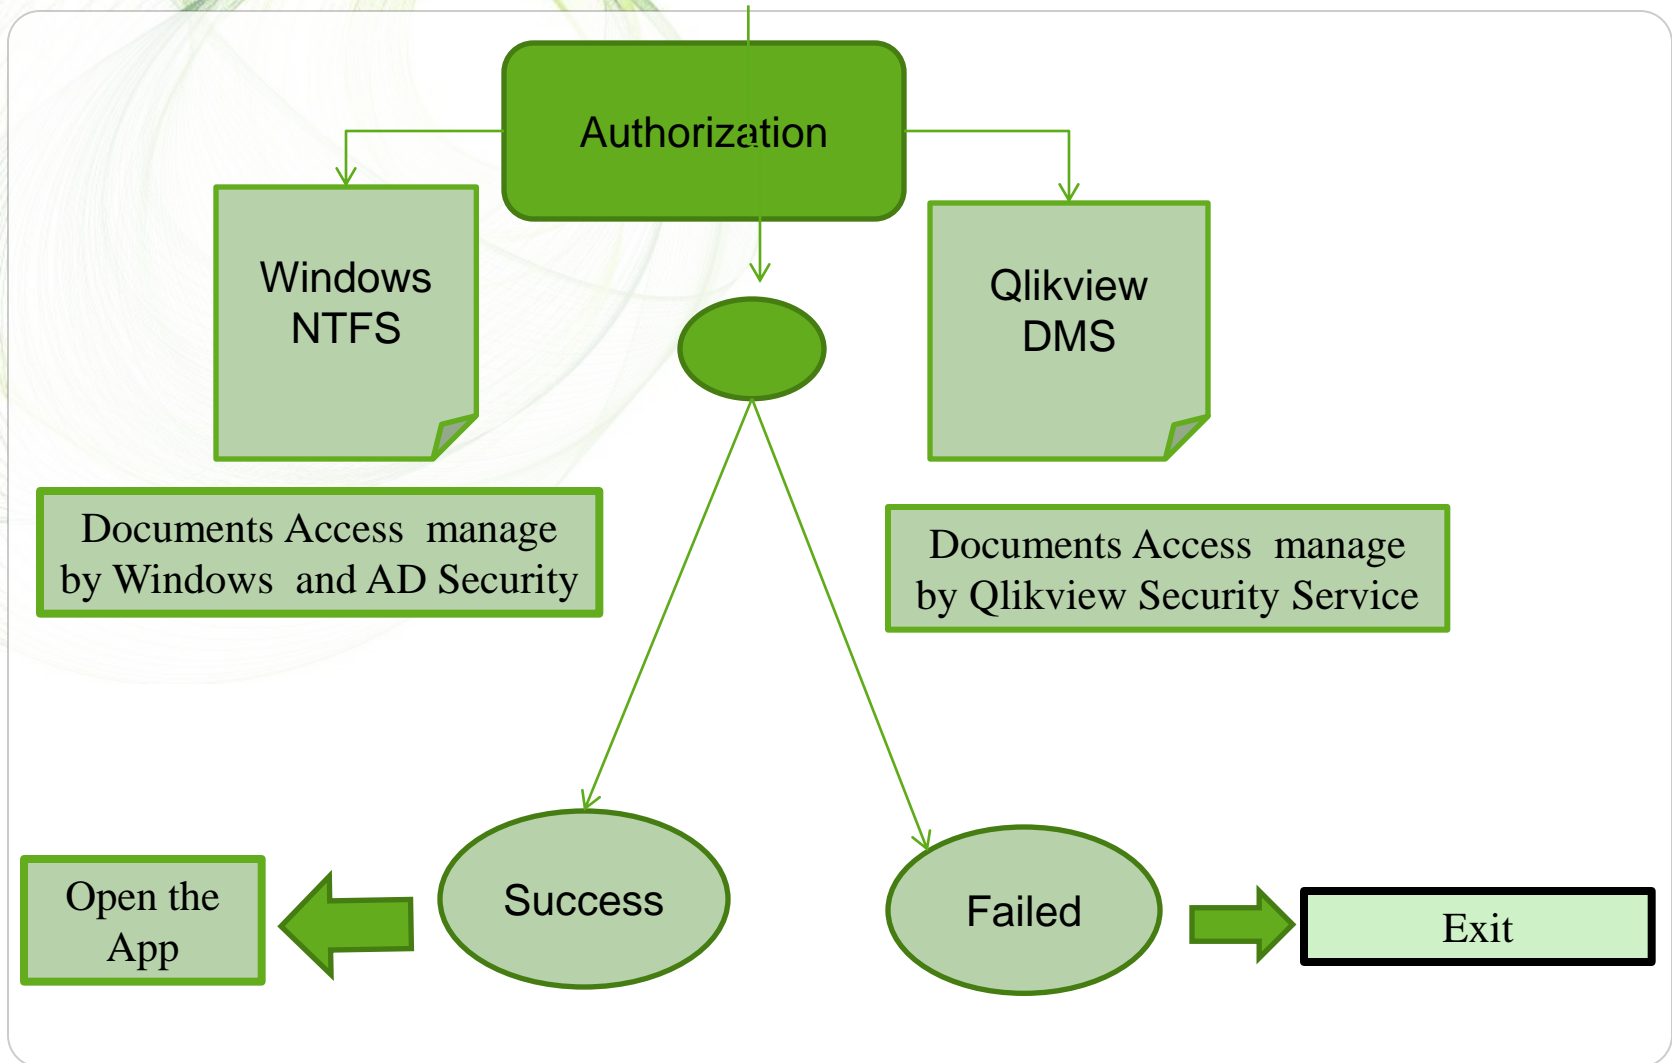

Show your ticket please !

1. User points browser to QlikView Access Point
2. Access Point Authenticates User
3. Access Point requests document list
4. QlikView Server returns document list
5. Access Point displays document list to client
6. User selects a document
7. Access Point requests a ticket on behalf of user
8. QlikView Server writes ticket data to a local file
9. QlikView Server trusts Access Point, and returns a ticket
10. Access Point delivers the ticket and a placeholder document to client
11. The client uses the ticket & requests the right file from the AP
12. The AP uses the ticket & request the right file from the QlikView Server
13. QlikView Server verifies ticket information with local file
14. If ticket is okay, QlikView Server retrieves user name from local file

What do you want to see here ?

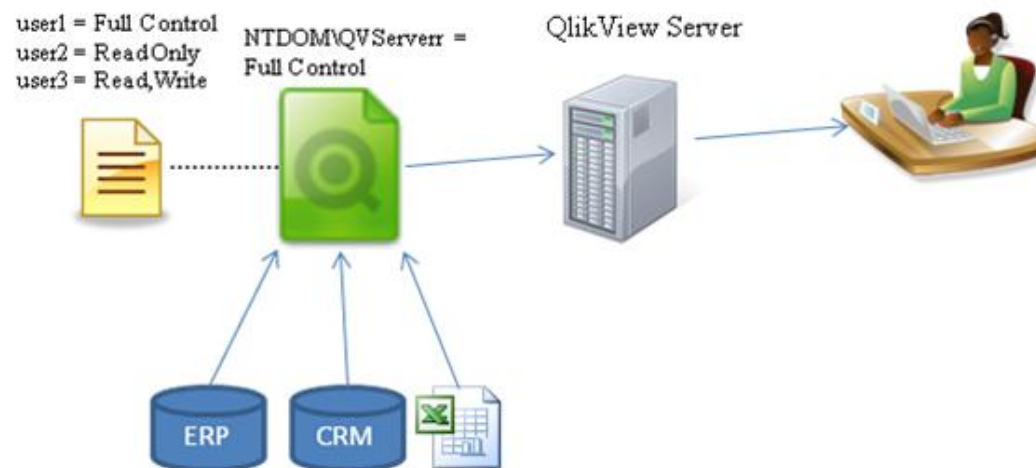

NTFS vs DMS

NTFS Authorization on a QlikView Server:

DMS Authorization on QVS

Example : Create Ticket and open an application

Qlikview Server 10 SR1 with the following settings:

- QVS@ : Security → DMS
- DSC@ : Custom Directory
- QVWS@ : Custom User
- User documents : Recipients for document defined
- Userid must be in the group of QV Administrators to create a ticket directly using the url above

Create Ticket

<http://localhost/QvAjaxZfc/GetTicket.aspx?cmd=%3CGlobal%20method=%27GetTicket%27%3E%3CUserId%3ETest%3C/UserId%3E%3C/Global%3E>

Start application with it

<http://localhost/QVajaxzfc/opendoc.htm?document=Films.qvw&ticket=8B5972F39BE4ACE4E1CAFFD7500BF42D008E05D2>
